C. Unit packaging. Components shall be packaged in accordance with documents referenced in Table I.

D. Intermediate packaging.

(1) Packets. Packets of cream substitute and peanut butter & jelly combination shall be packaged in intermediate bags in accordance with documents referenced in Table I.

(2) Dining packets, meal trays, and paper cups. Fifty dining packets, 50 meal trays and 75 paper cups shall be packaged in quantities of 25 each. Dining packets shall be oriented in one direction in a loose-fitting intermediate bag so as to have the flexibility to be packed in available space within the shipping container.

D-2 LABELING

~~A. Shipping containers. Shipping containers shall be marked in accordance with DSCP Form 3556, Marking Instructions for Shipping Cases, Sacks, and Palletized/Containerized Loads of Perishable and Semiperishable Subsistence, and as specified in the contract. The color of the lunch/dinner menu labels shall conform to 34491, 34504, 34516, or 34518 of FED-STD-595, Colors Used in Government Procurement. The color of the breakfast menu labels shall conform to 30450, 33531, or 33617 of FED-STD-595.~~

D-3 PACKING

A. Packing.

(1) UGR. Each complete menu shall be assembled into three shipping containers using the suggested loading sequence specified in Table IV. Because of the number of non-developmental components and the variety of packaging available from different manufacturers of the same product, it may be necessary to move a product from one compartment to another where space is more available. Each shipping container shall be fabricated in accordance with style RSC, grade V3c of ASTM D 5118/5118M, Standard Practice for Fabrication of Fiberboard Shipping Boxes and Figure 2. The inside dimensions of the shipping container shall be 23 3/4 inches in length, 13 3/16 inches in width and 8 3/4 inches in depth. Each shipping container shall be fitted with two V3c partitions in accordance with Figures 1 and 3. Kraft paper as specified in A-A-203, Paper, Kraft, Untreated, shall be used to fill voids and immobilize menu components. Shipping containers shall be free from evidence of rodent or insect infestation. Shipping containers may be assembled by either stitching, gluing, or taping. Each container shall be sealed in accordance with methods B or C of ASTM D 1974, Standard Practice for Methods of Closing, Sealing, and Reinforcing Fiberboard Boxes. If the shipping container is assembled by stitching, a paperboard pad shall be used on the bottom of the box.

(2) Partitions. The center panel of each partition shall meet at the center of the box to divide the box into two equal compartments (cell "A" and "B"). The end panels of the partitions shall butt together at each end of the box (see Figure 1). The partitions shall be full depth partitions and fabricated according to Figure 3.

D-4 UNITIZATION

A. Unit loads. Shipping containers shall be arranged in unit loads in accordance with Type I, Class A of DSCP Form 3507, Loads, Unit: Preparation of Semiperishable Items.

D-5 MARKING

A. Menu marking. The three boxes comprising one menu shall be positioned on the pallet side by side and marked in sequence so that the menu can be identified as one unit (two, three box menu units to a tier). Using either labels or stencils on the top panel, with characters at least 2 inches high, the boxes shall be identified as "BOX 1", "BOX 2", and "BOX 3". The characters shall be oriented so as to be readable when facing the marked end panel.

B. Shipping containers and unit loads. Marking of shipping containers and unit loads shall be as specified in DSCP Form 3556, Marking Instructions for Shipping Cases, Sacks and Palletized/ Containerized Loads of Perishable and Semiperishable Subsistence. In addition, all unit loads containing the same menu will be identified with the large characters in a permanent contrasting color. Marking shall be as follows:

UGR	Heat & Serve	"L/D" (LUNCH/DINNER)		MEAL
		or	and	NUMBER
		"B" (BREAKFAST)		"No

SECTION E INSPECTION AND ACCEPTANCE

The following quality assurance criteria, utilizing ANSI/ASQC Z1.4-1993, Sampling Procedures and Tables for Inspection by Attributes, are required. When required, the manufacturer shall provide the certificate(s) of conformance to the appropriate inspection activity. Certificate(s) of conformance not provided shall be cause for rejection of the lot.

A. Definitions.

(1) Critical defect. A critical defect is a defect that judgment and experience indicate would result in hazardous or unsafe conditions for individuals using, maintaining, or depending on the item; or a defect that judgment and experience indicate is likely to prevent the performance of the major end item, i.e., the consumption of the ration.

(2) Major defect. A major defect is a defect, other than critical, that is likely to result in failure, or to reduce materially the usability of the unit of product for its intended purpose.

(3) Minor defect. A minor defect is a defect that is not likely to reduce materially the usability of the unit of product for its intended purpose, or is a departure from established standards having little bearing on the effective use or operation of the unit.

B. Packaging examination.

(1) UGR - assembled menus. The assembled UGR menus shall be examined for the defects specified in Table IV. The lot size shall be expressed in assembled menus (3 shipping containers per menu). The sample unit shall be one fully assembled menu. The inspection level shall be S-2 and the AQL, expressed in terms of defects per hundred units shall be 2.5 for major defects and 4.0 for minor defects. Five assembled menus shall be randomly selected from the lot and examined for critical defects. The finding of a critical defect shall be cause for rejection of the lot.
